

Htet Aung Lin (Kelvin)

Frontend Engineer - React / Next.js, AI Chat Interfaces & Design Systems

htetaunglin.coder@gmail.com | 09756302537 | Yangon | htetaunglin-coder.dev | linkedin.com/in/htetaunglin-coder | github.com/htetaunglin-coder

PROFILE

Frontend engineer with 2+ years building AI chat interfaces, design systems, and React/Next.js apps. I built the streaming frontend for an ERP AI assistant (messages render as chunks arrive, with charts and product cards) and MijnUI, a design system used in production across several products. Now I work across the stack at a US startup on AI agent and WhatsApp integrations with Twilio, working directly with founders to ship features.

WORK EXPERIENCE

Full Stack Developer, TalentOS 01/2026 – Present | Remote

- Built and shipped the MVP in **under 2 months**, on an architecture the team could keep extending instead of rewriting; now in pilot with real users.
- Built WhatsApp and AI-agent integrations with Twilio to connect employers and candidates.
- Design and revamp landing pages and product UI, working across the stack from interface to API.
- Work directly with founders, turning product goals into shipped features.

Frontend Developer, Pico Innovation 10/2025 – 12/2025 | Remote

- Built the Pico AI Assistant frontend in Next.js with streaming messages via Zustand state management; the interface renders charts, images, product cards, and text responses from ERP integrations.
- Designed the message state flow to prevent UI blocking during API streams: messages render as chunks arrive instead of waiting for complete responses.

Junior Frontend Developer, Pico Innovation 01/2025 – 09/2025 | Remote

- Built MijnUI, a component library of **25+ packages** (React + Tailwind CSS), with a consistent props API so the team could adopt components easily.
- Integrated the Tiptap rich text editor and QR code generation into a PDF editor product; moved duplicate rendering logic into shared utilities to shrink component files.
- Evaluated PDF manipulation tools (APIX Data, Canva, Penpot) against product requirements and documented rendering performance, API flexibility, and licensing trade-offs to inform technical decisions.

PROJECTS

Resizable Layout Component – github.com/htetaunglin-coder/react-resizable-layout 08/2025 – Present

- Built a collapsible panel system with react-resizable-panels that fixes animation-timing jank during quick collapse/expand by syncing CSS transitions with layout calculations.
- Fixed hydration mismatches by moving panel-size calculations to SSR; user preferences persist via cookies, removing the flash of unstyled content on load.
- Published as an open-source package installable through the shadcn CLI, with documented edge cases and a migration guide.

SKILLS

Languages: TypeScript, JavaScript, HTML5, CSS3

Frameworks: React, Next.js, Tailwind CSS

Frontend: React Query, Radix UI, Zustand, Storybook, Tiptap, shadcn

Tooling: Git, monorepo & npm publishing, Fumadocs
